

AMENDMENTS TO THE SPECIFICATION

The specification has been amended as follows:

Pages 22-23

Paragraph [0077] has been amended as follows:

[0077] Since the body 51 of the accumulator 45 is fixed to the cylinder head 1 by means of the screw part 56 at the lower part thereof, oil never leaks from the body 51 even when e.g., oil leakage occurs at part of the body 51 which is fixed to the cylinder head 1. Therefore, it is possible to suppress oil leakage to the outside even if the part of the body 51, which is fixed to the cylinder head 1, is sealed in a simple manner. The body 51 should not necessarily be fixed to the cylinder head 1 by means of the screw part 65part 56, but for example, the body 51 may be fixed to the cylinder head 1 by press-fitting or by using a combination of a flange and a fastening screw.
